

## Introducing Recover My Files

Recover My Files is a data recovery program that will recover:

- Files and Folders emptied from the Recycle Bin.
- Files and Folders deleted using DOS commands (via the command line).
- Drives that have been accidentally re-formatted - even after a new operating system has been installed.
- Drives where the drive letter can no longer be accessed via Explorer or My Computer
- Digital camera storage cards which have been formatted or from which photos have been deleted.
- Temporary backup files created by applications like Word, Excel and PowerPoint.

Recover My Files can recover data from various types of file storage media including; Hard Drives; Floppy disks; Zip Disks; Digital camera cards; USB Drives; or any other storage device where the Drive Letter [e.g. C; D; E; etc] can be seen or the physical drive recognized.

It has a built in file preview which allows you to examine the contents of many types of deleted files prior to saving (see the table below).

Recover My Files will find both ["Deleted Files"](#) and ["Lost Files"](#). The Lost Files search supports more than 300 file types, including:
